# Step 1

Determine which method of mounting will be used
. . . CEILING, WALL or SUSPENDED.

The Universal Mounting Brackets (with the
Ceiling Support Connector attached) can
be used for either wall mounting or
connects to a suspending threaded rod
(3/8" Threaded Rod supplied by others).
IMPORTANT: While installing the hardware add
3" to the height stated on the curtain tag.

If you are ceiling mounting, use the Ceiling Support Connectors only.

CEILING MOUNT

Ceiling Support Connector

Step 2

## SINGLE TRACK

1) Affix an End Stop to just one open end.

SPLICING MULTIPLE TRACKS TOGETHER

Loosely place 2 allen screws onto each
Straight Splice Connector, just one and
a half turns

1. Insert the two tracks and tighten the screws.
Repeat this process until all pieces of track are
spliced together.

2. Affix an End Stop
to just one open end.

3. Measure the length of the track

Important Note for All Mounting Methods

Whether you are mounting a single piece of track or multiple pieces
that you have spliced together, you should place the Mounting
Brackets approximately 6" from each end and each side of a Splice
Connector.

6"   6"   6"

*However, it is more important to attach the bracket to
solid material than to comply with the 6" measurement.*

Step 3 – CEILING MOUNTING

The ceiling surface must be flat and level with the floor.

1. This height is pre-determined by your ceiling height.
   IMPORTANT: Make sure the ceiling height is at least
   3" higher than your curtain height.
2. Place a mark on the ceiling where both ends of the
   track will fall. See Step 2 for track length measurement.
3. Connect these marks with a straight line.

Place the Ceiling Support Connector
on the ceiling. Mark the 2 mounting
holes. Remove the bracket, drill the 2
holes and screw the bracket to the
ceiling.

Step 3 – WALL MOUNTING

1. On the bulkhead, place a mark 5" higher than
   the height of your curtain on one side.
2. From that point stretch a line level to the
   opposite side and place a mark. That distance
   should be the length of your Straight
   Track assembly. See Step 2.
3. Connect the marks with a straight
   level line.

Place each Mounting Bracket on the
wall so the top edge of the bracket is even
with the line. Mark the 2 mounting holes. Remove the bracket,
drill the 2 holes and screw the bracket to the wall.

Step 3 – SUSPEND MOUNTING

Using this method, you will need beam clamps
and threaded rods that are not included with
your hardware. **1.** Measure the distance from
bottom of the roof beam or truss. Subtract from
that amount, the height of the curtain plus an
additional 3". The threaded rods should be
2" longer than that final measurement.
NOTE: It is important that all of the threaded
rod ends are level with one another.

BEAM CLAMP

Place a nut 1" up from the bottom of the threaded rod. Next
place a washer over the rod, then the Universal Mounting Bracket,
and finally another washer and nut. Tighten the assembly.
See the illustration to the right.

Step 4

INSERTING NYLON ROLLERS WITH HOOKS

1) Place each roller into the open end of the track. The number of rollers must be equal to the number of grommets on the top edge of the curtain.
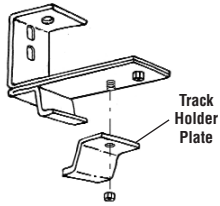

**2)** Affix the second End Stop to the open end of the track.
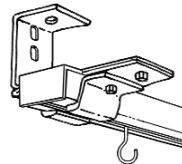

Step 5

ATTACHING TRACK TO BRACKET/SUPPORT CONNECTOR

For this step you will need an assistant.

Track Holder Plate

Straight Track (Assembly if multiple tracks)

First, remove the Track Holder Plate from each of the Support Connectors

Next, place the Straight Track (assembly) into the Support Connector.

Finally, replace the track holder plate to each of the Support Connectors and tighten the locking nut so the track is secure.

Step 6

HANGING THE CURTAIN

Place each curtain grommet over a roller hook and mounting is complete. The logo should face to the outside.

NOTES

INDUSTRIAL CURTAINS
INSTALLATION INSTRUCTIONS

GETTING STARTED

Open all carton(s) containing hardware and remove all items. Position the hardware on the floor under the opening. Next, look in the box containing the curtain. The height and width of the curtain will be listed on a tag attached to the curtain.

NOTE: The actual height will be 3" shorter to allow for the thickness of the sliding track and a 1" gap off the floor. ***Please check the chart below to make sure you have the correct number of items.***

		Curtain Width		
		72"	144"	288"
Item	Model No.	No. Req'd	No. Req'd	No. Req'd
Straight Track	008-00180	1@48'' 1@24''	3@48''	6@48''
Universal Mounting Bracket	095-00001	2	4	8
Ceiling Support Connector	008-00018	2	4	8
Straight Splice Connector	008-00082	1	2	5
Nylon Roller with Hook	008-00064	8	14	28
End Stop	008-00028	2	2	2
Curtain		1	1	1
